

DEVELOPER 2

Full Time Employment Opportunity

Reporting to the Supervisor, Application Services, the Developer 2 is responsible for the analysis, design, development, testing, implementation and maintenance of software programs (reports, interfaces, conversions, enhancements, workflows, services, etc.), applications and systems. Under the guidance of the Developer 3, Lead Developer or the Systems Analyst, the incumbent is capable of performing complex and large development assignments, and may assist with planning and directing a small development team through the development stages of a project or production support effort. The incumbent provides support to end-users by providing application expertise, training, and development. Incumbents may be primarily involved in project-based delivery or in application support.

Duties:

- Design, develop, maintain, test, document, and support software programs and applications in accordance with the systems development methodology and standards.
- Analyze program failures, resolution, and recovery.
- Document investigation results including causes of errors, and solutions provided.
- Participate in defining and documenting business requirements, objectives, and deliverables in collaboration with business and IT stakeholders.
- Provide recommendations and solutions based on application capabilities and business needs.
- Participate in translating conceptual designs to the physical components.
- Apply Enterprise Architecture principles, standards, and methodology to ensure effective solution design.
- Document program specifications for development.
- Develop software according to specifications and to meet business needs.
- Test development and document results.
- Administer critical analyses of test results and deliver solutions to problem areas.
- Design, run and monitor software performance tests on new and existing programs for the purposes of correcting errors, isolating areas for improvement and general debugging.
- Liaise with technology staff, vendors and end-users to implement and/or assist in resolving problems with software programs and applications.
- Participate in defining software development project plans, including scoping, estimating, scheduling and implementing.
- Oversee other development team members to ensure successful quality and delivery of project assignments.
- Accurately report project and/or development status to a senior team member.
- Develop training and implementation plans with input and approval from senior development staff, end users, and management.
- Encourage a climate that supports diversity.
- Performs other duties as assigned.

Primary Qualifications:

- Completion of a recognized degree or diploma in an IT related discipline, or an equivalent combination of education, certification, and experience.
- A minimum of four (4) years of software development and implementation experience.
- Proven track record of excellent technical, analytical and problem solving abilities.
- Previous training in a variety of programming languages, analysis and design techniques, development methods and practices, and relational databases and operating systems.
- Strong analytical, problem solving and organizational skills.
- The ability to work in a team environment.
- Previous experience in web content management systems, web site/application development, web service development, enterprise service bus, ETL development, Cognos BI tools, JD Edwards, Lawson, HPSM and Terradata development are assets.
- Continuous upgrading & learning is required to remain current in information technology.
- The core competencies for this position include achieving quality results, adaptability/managing change, communication, customer service, decision making and problem solving, integrity and building trust, teamwork and cooperation and valuing diversity. These competencies are deemed important for the success of the position and organization.
- Satisfactory work performance in the preceding twelve (12) months is a requirement. Attendance rate will be a factor in the pre-screening process.

Secondary Qualifications:

- Bilingual (French/English) language skills.
- Previous experience in the gaming, retail and/or distribution industries, ERP systems, Business Analytics, financial or human resources functions.
- Previous experience in web service development and enterprise service bus.
- Experience working in an agile development environment.
- Knowledge of ITIL process and/or SOA principles.
